42973 to 42982—Continued.

foliage, and terminal and axillary many-flowered clusters of pure white, delicately fragrant flowers 1½ inches in diameter and borne on short, erect branchlets. It is a plant which will be prized by persons who realize that among the wild roses are some of the most beautiful of all flowering plants and who find a place for them in their gardens." (Arnold Arboretum Bulletin of Popular Information, new ser., vol. 1, p. 39, 1915.)

42980. Rosa Jackii Rehder.

"This beautiful rose was introduced into the arboretum from Korea several years ago by Mr. Jack, and when it flowered was named for him. At about the same time it was named in England Rosa bakeri and R. kelleri, names which can not be used for it, however, as they had previously been given to other roses. It is one of the Multiflora roses with long stems which lie flat on the ground, lustrous foliage, and pure white flowers 2 inches or more in diameter, in wide many-flowered clusters. The flowers are larger than those of the Japanese R. multiflora, and it blooms much later than that species. This rose is perfectly hardy and a first-rate garden plant. The hybridizer ought to be able to find in it a good subject from which to raise a race of hardy, late-flowering rambler roses." (Arnold Arboretum Bulletin of Popular Information, new ser., vol. 1, p. 43, 1915.)

42981. Rosa multiflora cathayensis Rehd. and Wils.

"Rosa multiflora, var. cathayensis; it is a hardy, vigorous, and handsome plant with the habit of the Japanese R. multiflora. The flowers are from 2 to 2½ inches in diameter and are produced in large, many-flowered clusters, and the large, conspicuous, bright-yellow anthers add to the beauty of the clear pink petals. This rose may well become a popular garden plant. It offers possibilities which the hybridist will undoubtedly take advantage of; and it is of considerable historical interest as the wild original of garden plants cultivated probably for centuries by the Chinese and known in Europe and America for more than a hundred years." (Arnold Arboretum Bulletin of Popular Information, new ser., vol. 1, p. 35, 1915.)

42982. Rosa sweginzowii Koehne.

A rose from western Szechwan, with deep rose-colored flowers, growing to a height of 5 meters, at altitudes of 2,300 to 3,600 meters. The shoots are thickly covered with short, stout, flattened prickles. (Adapted from *Plantae Wilsonianae*, vol. 2, p. 324, 1915.)

42983 to 42985. Ananas sativus Schult. f. Bromeliaceæ.

Pineapple.

From Brisbane, Australia. Plants presented by Mr. J. F. Bailey, director, Botanic Gardens. Received June 28, 1916.

42983. "Cayenne Queen, smooth leaf."

42984. "Ripley Queen, rough leaf."

42985. "McGregor. A variety raised by Mr. E. Smallman, of Ormiston, and named in honor of our immediate past governor, Sir William McGregor." (Bailey.)
